

Instructions for ker-pb-xxxx Parallel boards.

When charging multiple batteries with this Multi Balance Board, do the following.

- 1) First attach one battery and tap.
- 2) Start the charge cycle
- 3) Then once charging has begun, immediately plug in any additional packs to the balancing board. This will prevent one battery from discharging into another before charging has started.

Remember this is a parallel charge board, so the charge amp rate will have to be increased to compensate for additional batteries.
